Sliding Tray Drawer

Sliding Trays Drawer is mainly used for:

- Patching only (patchcords, connected breakout cables, intra-facility cables) or
- Splicing loose tube cables and patching the pigtails to patchcords.

Where full and easy access at both sides of the connection is required, sliding trays are used instead of front patching, pivoting ones. A connector can be patched in a different position within the same tray with a perfect control of the extra length.

Accurate design and compact adapters allow to accommodate 12 terminations (24 using SFF connectors) per tray. Swing-removable adapter holders make it easy to access each connection in the shelf. Kits to attach cables at the side or the back of the shelf are available. Furthermore, PLC splitters as well as FBT splitters or other optical passive components can be integrated. Trays preloaded with adapters and pigtails are also available.

INSTALLATIONS

- Central Office racks
- Pops street cabinet
- Data Center frames
